

## New assignment tool

### Reusing old assignments

Many have asked if it's possible to reuse old assignments. The answer is yes. When copying an assignment, you'll end up with the same content and settings, but in the new assignment tool.

To guide you through the changes, we offer a short onboarding tour the first time you copy an assignment.

### What is lacking in the new assignment tool that we have in the new?

We have focused on developing an easy to use assignment tool by simplifying the creation and assessment process. There are still gaps between the features of the old and the new assignment tool. We are still determining how to best deal with these gaps. Our intention is to make a great assignment tool, not necessarily include every option and feature from the old tool.

FEATURE GAP	STATUS
Copy an assignment with answers	This is on our to-do list.
Transfer to assignment to the assessment portfolio	This is on our to-do list.
Show deleted answers	This is on our to-do list.
Place a student in a course group when the assignment is completed	To be decided. Ideally this should become part of a holistic Learning Path feature which we – though another team - plan to start on in Q3.
Self-enrolment groups	To be decided. This is by far the least used form of group assignments. When copying an old assignment, we will set 'Student defined groups' instead.
Comment files	We believe our only annotation options are better meeting the needs of our users than downloading the answer and uploading the answer file. Note that it is still possible to upload a file via the RTE.

Please note that the assignment tool is continuously developed based on your feedback

## Create and view Microsoft Office documents

For system administrators:

- Office Online is by default off. To enable Office Online, go to Admin > Edit global settings > Cloud Services.
