

itslearning release 96

360° reports arm you with powerful insights about your students

Getting all the insight about your students can be an exercise in frustration. Name a teacher who hasn't struggled with scattered information devoid of context! Our new 360° Report solves this. It quickly provides you with insights you need to evaluate your students – and take action.

The report has three main areas: activity, progress and grades. Use the reports to look for students who need support, check whole class progress or check the progress of a single student.

A 'one click' navigation system presents you with compelling graphical presentations:

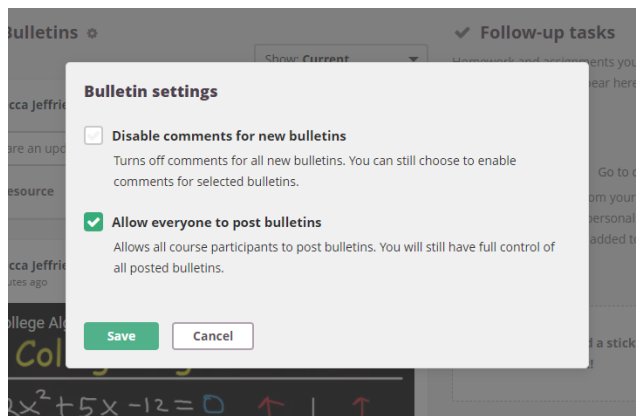

To find the 360° report, go to a course and click '360° Reports'.

Note that the 360 Reports will gradually be made available over a period of about three weeks after the release. Don't worry if you don't see it right away.

Course bulletin boards now open to all

Do you want more student engagement in your courses? Why don't you open the bulletin board in the course the students and see where the discussion takes you! Teachers can of course moderate all posts.

To open the bulletin board, simply click the cog wheel behind the Bulletin heading to access the new bulletin settings. Then select 'Allow everyone to post bulletins'.

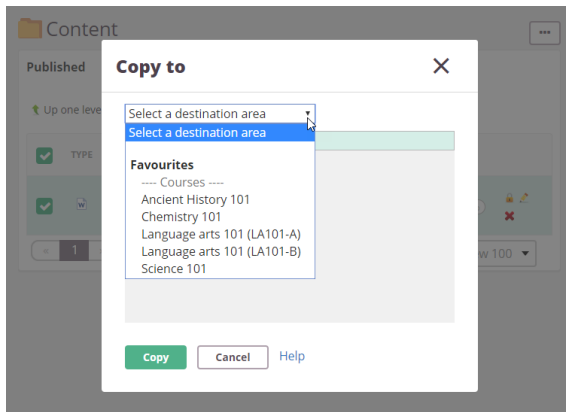

Also note that we've moved the setting 'Disable comments for new bulletins' from the Course settings page to the Bulletin settings.

Distinguish courses with identical names

Having several courses with the same name can be confusing, especially when they appear under each other in lists. To help you distinguish courses with identical names we now show the course code after the course name.

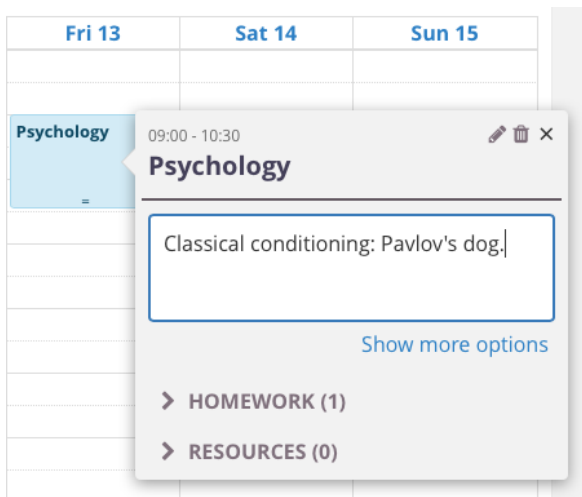

You'll see the name and code in:

- course lists
- when you copy or move content
- when you add content from the Library
- in messages
- in the calendar

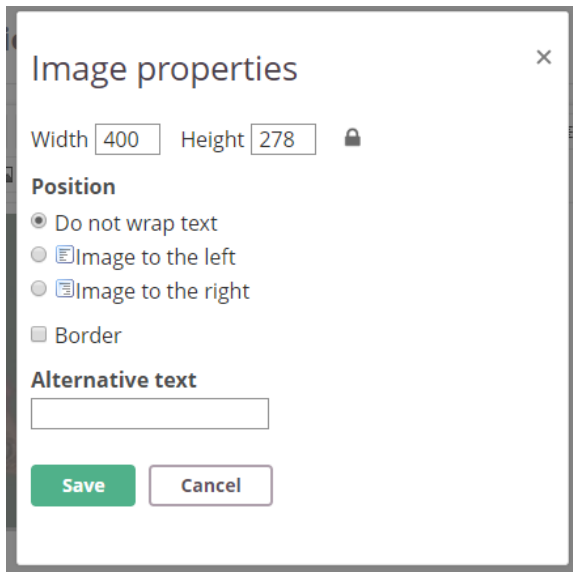

Edited calendar events automatically saved

The 'Save' button is a thing of the past when you edit calendar events. Simply make your changes, click outside the pop-up and, *voilà*, your changes are automatically saved.

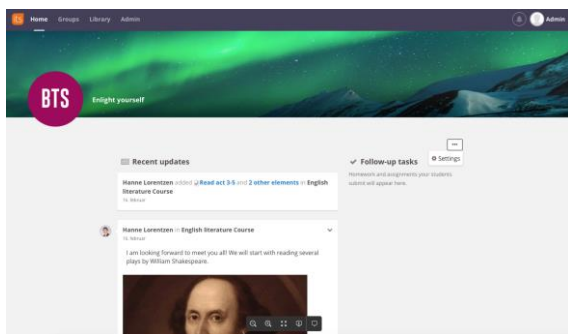

Size your images perfectly

All of you picture perfectionists can now enter a specific width and height of an image from the 'Image properties' dialogue in the rich-text editor. This will size your picture exactly as you want it. To see the 'Image properties', simply right click an image in the editor. Remember that you can also drag the corners or sides of the image to resize it.

Site branding only for root hierarchy admins

To avoid conflicts between admins at different schools, only admins in the root hierarchy will have access to the site branding. All admins can still manage the dashboard branding.

Terminology for Higher Education

Support for Higher Education terminology is now implemented for all pages in itslearning.

In addition, we've added the following improvements to the Danish higher education terminology:

- 'Lærer' is now called 'Underviser'
- 'Projekt' is now called 'Projektrum'

Library enhancements

Finally, we've done some small changes to enhance the Library:

- To save space we've moved the 'Add to Library' button to the ... menu.
- Search results now get an extra boost when they have learning objectives connected to them. This is done due to the value of this type of metadata
- To speed up the search, we now hide learning objectives when previewing content from other countries.
